

Major Accident Prevention Policy (MAPP) Statement

Policy:

Storengy UK Ltd recognises the potential for major accidents to occur from its operations and is committed to providing a high level of protection to its employees, contractors, visitors, neighbours and the environment.

Storengy UK Ltd believes that all major accidents are preventable and is committed to carrying out regular reviews of its operations for major hazard potential and to seek improvements to achieve this objective.

Accountability for the provision of a safe and healthy working environment through active leadership, robust procedures and instructions, effective training programmes and good communications is cascaded through all levels of management.

Storengy Management System:

Storengy UK Ltd will provide and maintain a safety management system (SMS) for implementing the MAPP which will seek to prevent major accidents and mitigate their effects by:

1. Ensuring that an effective organisation exists for the management of major hazards and that the responsibilities for the management of major hazards are clearly defined. This will be delivered through the selection of competent personnel who are regularly trained in the management of major hazards. The participation, co-operation and communication between all levels of the organisation, including contractors will be actively encouraged to drive a culture of continuous improvement in safety performance.
2. Defining arrangements for systematically identifying and evaluating the major hazards arising at all stages in the life cycle of the plant, including construction, commissioning, normal and abnormal operations, shutdowns and decommissioning with the aim of ensuring major hazard risks are assessed and reduced to as low as is reasonably practicable.
3. Adopting documented procedures and instructions for the safe operation and maintenance of plant, processes and equipment at all times throughout the operating life of the facility.
4. Identifying hazards in the design of new installations and the control of modifications to existing equipment, processes will be maintained with the aim of ensuring major hazard risks are as low as is reasonably practicable.
5. Identifying foreseeable emergencies by systematic analysis and preparing, testing and periodically reviewing emergency plans involving measures of protection, alert and intervention which are designed to minimise the effects of any major accident (including potential domino effects).
6. Safety and environmental performance will be continually monitored in order to assess compliance with the objectives set out in the MAPP and the SMS. This will include active and reactive monitoring together with auditing to identify and then implement improvement actions in a planned approach to deliver continuous improvement.
7. A formal periodic review of the MAPP Statement and the effectiveness and suitability of the SMS shall be carried out by the Management Team.

Please refer to the COMAH Report for further details of the MAPP.

Working Together to Work Safely
